

**TARGETED RESTRICTIONS**

**20% SAVING NEEDED**

**Zone 1:**  
This area gets water predominantly from Nooitgedagt. An immediate 20% saving is needed here to allow greater transfer of water to areas supplied by western dams.

**40% SAVING NEEDED**

**Zone 2:**  
This area is at great risk - high demand low rainfall led to depletion of dams, with only some water being transferred from Nooitgedagt. An immediate 40% saving is needed here to prolong the water stored in the western dams.

**40% SAVING NEEDED**

**Zone 3:**  
This area is at great risk even though water comes from Nooitgedagt via the east-west transfer scheme. An immediate 40% saving is needed here to prolong the water stored in the western dams. And to allow for the greater distribution of Nooitgedagt water.
